

## BUILT HTML PAGE

### Step 1: Open the Text Editor

In this step, we have to open any text editor such as Notepad or Notepad++ for writing an HTML code

### Step 2: Type the HTML code.

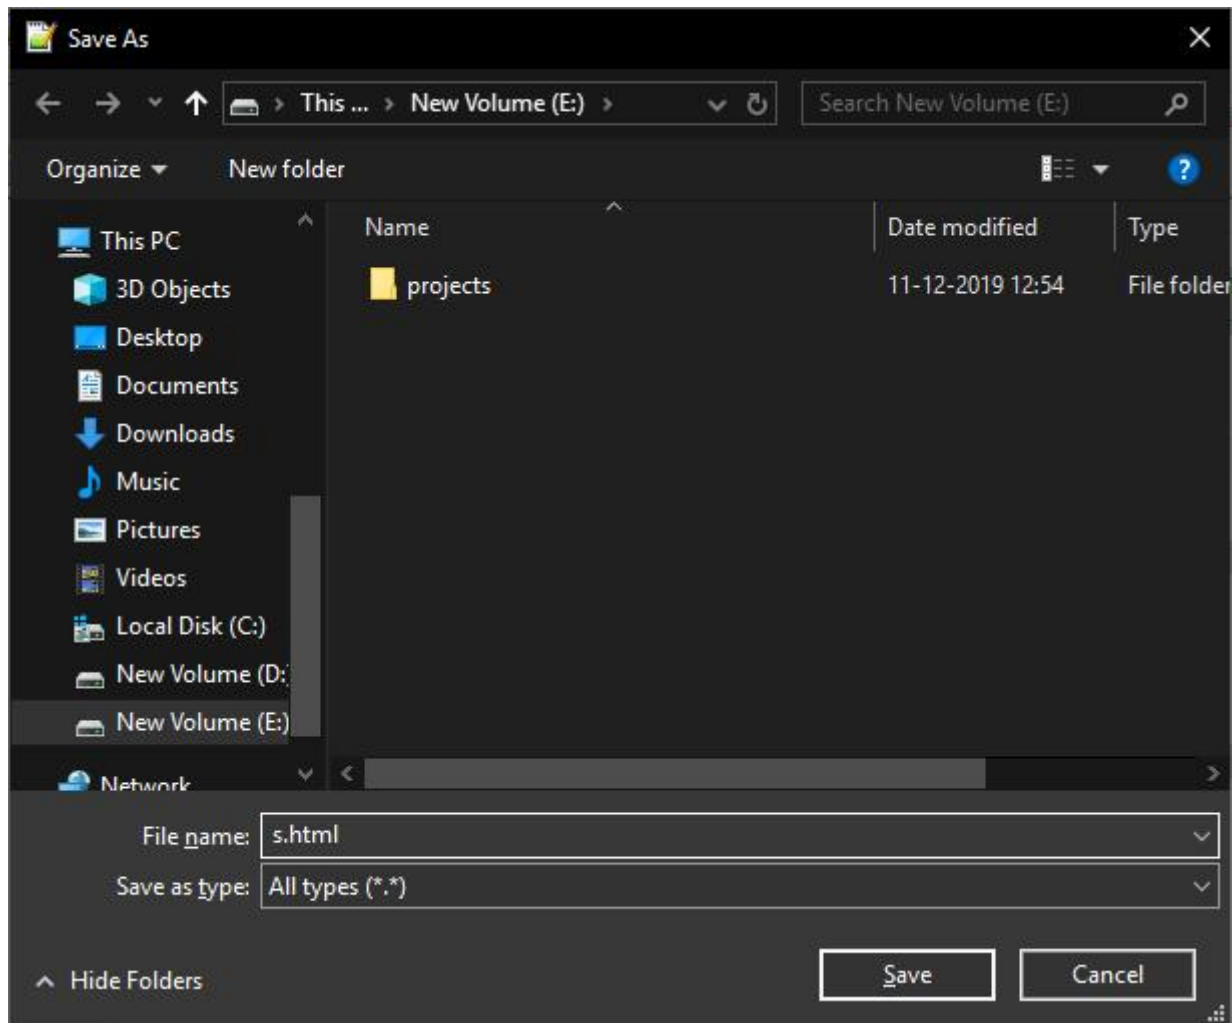

In this step, we have to type the HTML code in the text editor

1. **<HTML>**
2. **<HEAD>**
3. **<!--**
  - The Head tag is used to create a title of web page, CSS syntax for a web page, and helps in written a JavaScript code. -->
4. **</HEAD>**
5. **<BODY>**

6. `<!--`
  - The Body tag is used to display the content on a web page, which is specified between the body tag.  
`-->`
7. `</BODY>`
8. `</HTML>` `<!--` It is the opening tag of any HTML `-->`

Step 3: Save the HTML code.

After typing the complete HTML code, we have to save that file in a folder with **.html** extension.

Step 4: Run the HTML file.

At the last step, we have to execute or run an HTML file from the location where we saved the file. The file will run on a default browser.
